

# CHRISTINE ROBINSON

## DEVOPS / CLOUD ENGINEER

Bengaluru, India

+917010046597 | christinerobinson.dev@gmail.com | linkedin.com/in/christine-robinson-s | github.com/christine-robinson

### PROFESSIONAL SUMMARY

Hands-on DevOps / Cloud Engineer with 3+ years of experience automating, deploying, scaling, and maintaining high-availability AWS and Kubernetes production infrastructure. Skilled in Infrastructure as Code using Terraform and Terragrunt, GitOps continuous delivery via Argo CD, and end-to-end observability using Prometheus, Grafana, and Loki. Adept at production troubleshooting, reliability engineering, security scanning, and optimizing cloud deployment efficiency across scalable cloud-native architectures.

### TECHNICAL SKILLS

|                             |                                                                    |
|-----------------------------|--------------------------------------------------------------------|
| CLOUD:                      | AWS, Amazon EKS, EC2, S3, EBS, EFS, CloudFront, Route 53, ACM, IAM |
| INFRASTRUCTURE AS CODE:     | Terraform, Terragrunt                                              |
| CONTAINERS & ORCHESTRATION: | Docker, Kubernetes, Helm, Karpenter, Cluster Autoscaler            |
| CI/CD & GITOPS:             | GitHub Actions, Argo CD, Jenkins                                   |
| OBSERVABILITY:              | Prometheus, Grafana, Loki                                          |
| SECURITY & CODE QUALITY:    | SonarQube, Trivy, IAM, Secrets Management                          |
| NETWORKING & INGRESS:       | Kong, AWS Load Balancer Controller, Route 53                       |
| PROGRAMMING & SYSTEMS:      | Python, Bash, JavaScript, TypeScript, Linux                        |

### PROFESSIONAL EXPERIENCE

Senior DevOps Engineer | Signeasy — Bengaluru, India July 2025 – Present

- Automated AWS infrastructure provisioning using Terraform and Terragrunt, standardizing environment configurations and reducing manual infrastructure operations.
- Managed production Amazon EKS clusters using Helm, Karpenter, and Cluster Autoscaler to optimize workload placement, auto-scaling responsiveness, and compute resource utilization.
- Engineered automated CI/CD and GitOps workflows using GitHub Actions and Argo CD, streamlining Kubernetes workload deployments and improving release consistency.
- Implemented full-stack observability with Prometheus, Grafana, and Loki, establishing centralized metrics and logging pipelines to accelerate incident detection and troubleshooting.
- Integrated Trivy container security scanning and SonarQube code-quality checks into automated deployment pipelines, enforcing security standards prior to production releases.
- Troubleshooted complex production incidents involving EKS networking, AWS Load Balancer Controller, storage attachments (EBS/EFS), and Route 53 DNS configurations to support continuous platform uptime.

DevOps Engineer | Energetics AI — Chennai, India May 2023 – June 2025

- Provisioned core AWS cloud resources utilizing Terraform, reducing configuration drift and establishing consistent infrastructure state management.
- Built automated build and test pipelines using CI/CD tooling, reducing deployment friction and automating artifact generation for microservices.
- Containerized applications using Docker and orchestrated container deployments on Kubernetes, improving deployment repeatability and system reliability.
- Configured Linux infrastructure, networking components, and monitoring alerts to improve operational visibility and enable faster fault detection.
- Conducted production troubleshooting and system maintenance across Linux environments to enhance infrastructure stability and operational efficiency.

### KEY PROJECTS

AWS EKS Production Infrastructure Terraform, Terragrunt, EKS, Helm, Karpenter

- Architecture:** Provisioned high-availability Amazon EKS infrastructure using modular Terraform and Terragrunt codebases, integrating Karpenter and Helm for dynamic node and application management.
- Networking & Storage:** Configured AWS Load Balancer Controller, Route 53 DNS routing, and stateful volume drivers (EBS/EFS) to enable reliable storage and traffic routing for Kubernetes workloads.
- Operational Value:** Created a modular, self-healing cloud infrastructure foundation designed for automated workload scaling and predictable resource allocation.

Kubernetes CI/CD & GitOps Platform GitHub Actions, Argo CD, SonarQube, Trivy

- Pipeline Design:** Designed containerized build pipelines utilizing GitHub Actions, SonarQube, and Trivy for static code analysis, security scanning, and automated image creation.
- GitOps Delivery:** Configured Argo CD to enforce continuous delivery, synchronizing declarative Git repository configurations directly with target Kubernetes clusters.

- **Operational Value:** Automated application delivery processes while integrating security checks and maintaining auditability across cloud deployments.

## EDUCATION & PROFESSIONAL DEVELOPMENT

---

**B.Sc. Information Technology** — Pope's College of Arts & Science

2019 – 2022

**DevOps & Cloud Program** — Scaler (Status: In Progress)

Present

*Focus Areas:* AWS, Linux, Networking, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, Jenkins, Helm, Argo CD, Prometheus, Grafana.
